

Correction: fire-and-forget vs a QC-driven triage loop

LIVER

seed prompt

propagate

save masks

manual
proofread

WORM

run all chains
(overnight)

auto-QC scores
every frame

flagged?

no

accept
mask

yes

resume propagation
over live state

napari: fix prompt / mask
human, flagged frames only

*the human touches only the
small flagged fraction*

The liver SAM2 path has no automated QC; its fine-tuning and human-in-the-loop steps belong to the separate nnU-Net organelle path, not the instance propagator this pipeline parallels.
